

***eLighting™* Compatible DALI® MultiSensors**

In conjunction with TridonicAtco® we are now able to offer their MSensor™ range compatible with our ***eLighting™ for Niagara AX™*** solution.

The DALI®-MSensor is ideal as it offers daylight-dependent control and presence detection. With its built-in intelligence it gives a DALI® standalone system the important ability to detect movement in a room and to control the lighting levels on the basis of available daylight.

It is available in four form factors

Integrated for integration into luminaire fittings

Remote Ceiling for suspended ceilings

Remote Surface for surface mounting

In Wall for installation into European style flush-type boxes
