URGENT NOTIFICATION

End of Line Advisory for CBL LonFibre Products

CBL has announced that with immediate effect all currently available LonFibre products, as listed below, will cease to be available once existing stocks have been sold.

The cause of this action is due to the obsolescence of the ST laser diode components common to all these LonFibre products. CBL has taken every effort to resource these components without success.

To discuss future replacements please contact Mike Welch at mike@control-network-solutions.co.uk or +44 1256 818700

CBL Lon Fibre products affected are –

Product Family	Status
LonFibre SMX transceivers –	all versions last time buy*
LonFibre Routers –	all versions last time buy*
DFOC –	all versions Obsolete
FPod –	all versions Obsolete

Note: * We are working with CBL to establish available volumes of laser components remaining. We will then advise current clients of the potential volume of available products that can be manufactured. Orders will be accepted on a “first come first served” non-cancellable basis. Once all products are sold that use these stocks of laser components no further orders will be accepted.
